

## Challenge your students. And change the way they learn.

Challenge Based Learning allows students to connect more deeply with content by addressing real-world issues. Using a Mac, iPad, iPod touch, and easy-to-use software from Apple, students can engage, create, and collaborate in the classroom and beyond.

In this webcast, our panel of experts will report on a five-month, global Challenge Based Learning project at K12 and HiEd institutions. And reveal key findings, such as the 12 skill areas 90 percent of teachers felt were significantly improved by Challenge Based Learning.

You'll also see highlights from select case studies. And you'll hear from guest speakers—including study participants—who'll demonstrate the resources and possibilities for schools interested in implementing this groundbreaking framework.
