CAMP HRS

July 6-31, 2015

Summer programs for students entering grades 1-7

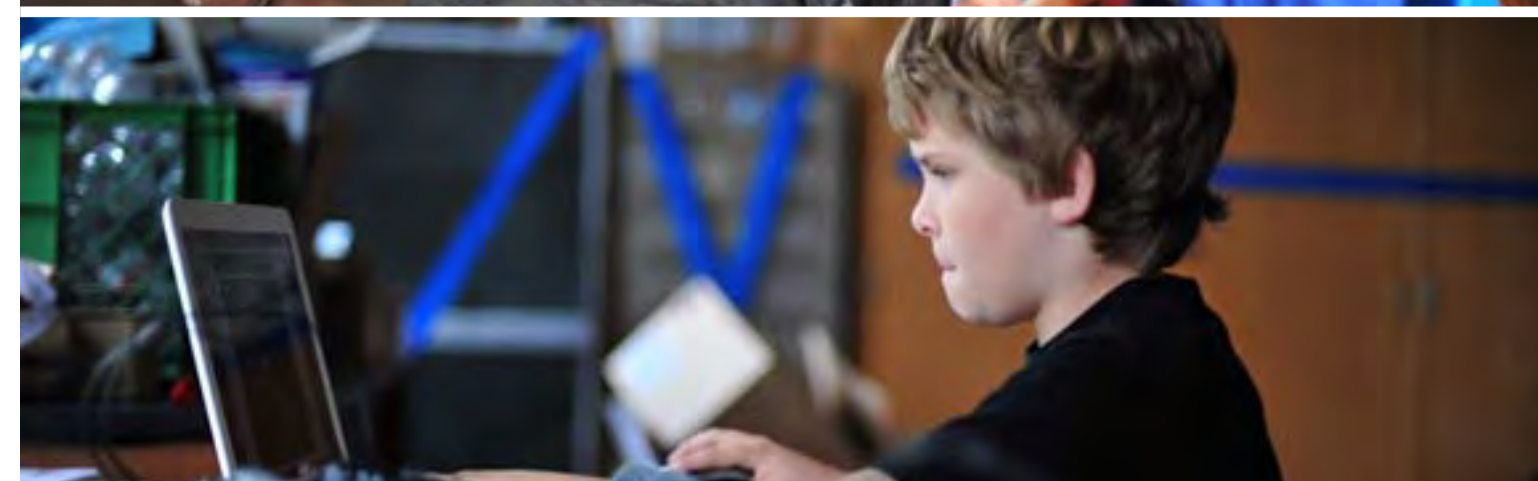

Summer in a brand new building!

The students at this year's Camp HRS will be the very first in Hamlin Robinson's brand new building on North Beacon Hill in Seattle.

After over 30 years and four different locations, HRS now offers a permanent building designed for the needs of our students. Features such as natural lighting, window design, soundproofing, intentional floor plans, and temperature controls will allow our students to focus and perform at their best.

Join CAMP HRS this summer and be a part of history!

Camp HRS Summer Offerings

A Fine Painter	Experiences in Music	Make Art with the Masters	Sports, Sports, Sports
Animals in Art	Fabulous Paper	Math Workshops	Stop Action Video
Art Around the World	LEGO Robotics	Rockets & Planes	Tae Kwon Do
Circus Arts	Mad Science	Slingerland Summer School	World Exploration

CAMP HRS

July 6-31, 2015

For students entering grades 1-7

Welcome to HRS!

Join us for a summer of fun and learning! Our teachers and camp leaders are highly trained professional instructors who understand and love working with kids. We are proud to offer an outstanding summer experience for students. We offer a range of fun, creative, educational, and exciting camp options, including music, visual arts, LEGO Robotics, circus arts, sports, science, math, reading and writing, stop action video, and more. Explore our options and see how fun summer can be!

Please note: Hamlin Robinson School will be relocating this summer to our very own brand new building, designed specifically for our students. Camp HRS will take place in this new building; our move-in date is June 15, 2015. (See back page for more information.)

Until that time, please direct any forms or correspondence to our location at 1700 E Union St, Seattle, WA 98122. Phone and email remain the same.

Want to see the schedule? Ready to register? Have additional questions?

hamlinrobinson.org/summer

Registration is due Friday, June 5, 2015.

Academic Offerings

Slingerland Summer School

We believe that all students are happiest when they feel successful. Students enjoy the Slingerland program because they understand the instruction and gain confidence in their ability to learn. We regularly see the pride in their successes.

This class is for students who may need extra support or who are not achieving at expected levels in reading, writing, and/or oral language. During the four-week class, students will learn and practice oral language skills, penmanship, sound-symbol correspondence, spelling, written expression, decoding, and reading comprehension strategies. The class structure includes a morning assembly and a daily recess and snack break. The time before recess is spent on writing, and later morning is spent on reading strategies.

Registration

Registration at Camp HRS can be customized to fit into any family's busy schedule. See options on the registration form or online at **hamlinrobinson.org/summer**.

To register for Camp HRS, complete the registration form (available online and at HRS) and return to Hamlin Robinson School at 1700 E Union Street by **Friday, June 5, 2015**.

You will be notified once HRS receives your form. Classes do have size limitations, so sign-up ASAP!

Before & After Care

Camp HRS provides optional wrap-around care during our summer program. Before Care opens at 8:00 a.m. and After Care runs until 5:30 p.m. Before and/or After Care is offered on a weekly basis to best fit the schedules of families during the summer program. Registration is required and we are unable to provide drop-in care.

Math Workshops

These workshops are designed to be both fun and educational. Each workshop focuses on a specific mathematic concept. We offer classes in Addition & Subtraction, Multiplication, Division, and Fractions.

Through exploration, games, and expert instruction, students will build on their understanding of core math skills and concepts. These workshops provide an opportunity to review and practice basic skills, as well as the ability to solidify understanding. Students will gain valuable skills that they can take forward into the classroom in the fall. These camps are designed for students who may need extra support or who are not achieving at expected levels in math.

Athletic Camps

Circus Arts

What's more fun than a circus? Juggling, unicycles, jump ropes, balance balls, and hula hoops – this camp has it all. Teamwork is a major focus in this class; you'll be working closely with classmates to create your very own circus. The week will end with students sharing what they have learned.

Sports, Sports, Sports

Can't choose your favorite sport to play this summer? You don't have to! We'll be emphasizing *fun* and good sportsmanship as we play football, soccer, basketball, and other games. You'll gain a wide range of athletic skills in this class and enjoy the sunshine!

Tae Kwon Do

Learn the elements of Tae Kwon Do through the philosophy of positive reinforcement and enjoy some great exercise! This program builds confidence, promotes the desire to learn, improves motivation, and teaches concentration and self-discipline while instilling in participants respect for themselves and others. This is the perfect physical activity for all students, both boys and girls.

Enrichment Camps

A Fine Painter

This class is for artists! Learn to look at the world differently, experiment with color, and paint! Use oil pastel, watercolor, acrylic, and tempera to paint the world around you. We'll discuss famous works of art for inspiration and let our imaginations take the lead. You'll have the chance to share and discuss your projects on a daily basis.

Animals in Art

Explore a different animal each day in this class. We'll talk about what the animal looks like, its habitat, and our emotional responses to it. Using pencil, oil pastel, and watercolor, play and experiment with drawing a lion, tiger, turtle, or bear. Discuss famous artists who have used animals in their work, such as Albrecht Durer's rhinos or Franz Marc's blue horses.

Art Around the World

Explore art from different cultures! We will create a rich variety of arts and crafts from different countries, such as pinatas and milagros from Mexico, origami Samurai helmets from Japan, and woven Native American baskets.

Experiences in Music

Prepare for a week of experiencing music in all its forms. Participate in drum circles using African djembe drums, play Orff xylophones, and strum the guitar or ukulele in a culminating concert. Explore musical genres including rock and roll, hip hop, jazz, folk, and classical.

Enrichment Camps, continued

Fabulous Paper

Explore all the amazing ways to make creations with paper! Make origami cranes, and get your hands dirty making your own paper. Create paper stencils, bind your own journal, and make Calder-inspired mobiles. Witness how a simple material like paper can truly come alive.

LEGO Robotics

Full day camp!

Design, assemble, and program your own robots using LEGO Mindstorms®. Explore the exciting world of environmentally aware machines. Imagine it, build it, and watch it go! You will learn the skills to build and innovate through practical science. You be building exciting robots on your first day. Design your robot, test it, and improve on the original design. What better way to get engaged in a STEM field?

Note: This camp is intended for children 9 years and older.

Mad Science

The world is a fascinating place – engage with it in this camp! You've no doubt observed the fascinating forces that shape the world, why not test them out? This week of science will encourage you to explore, predict, and test out ideas through hands-on science activities and experiments.

Make Art with the Masters

Paint and construct your own masterpieces in the style of our world's master artists. Learn about Henri Matisse and his Fauvist friends and paint a portrait in that style. Make a wooden sculpture influenced by one of Louise Nevelson's works, and make a crazy cubist collage like Pablo Picasso.

Rockets & Planes

This popular camp is a true blast! Explore and design as you make things fly into the summer sky. Be prepared to hone your rescue and recovery skills, because these paper planes and bottle rockets really do fly. Water and air will be used to propel your rockets.

Stop Action Video

Lights, camera, action! Stop action, that is. Bring your ideas and imagination and use digital cameras and computers to create your very own stop action videos. Learn how to add audio, titles, and transitions. Explore adding special effects to top off your creative endeavor.

World Exploration

Take an exciting journey to new lands as we experience cultures from around the world through games, sports, arts, and food. Explore what life might be like to grow up somewhere else and make meaningful cultural connections.
