

NSF SUMMER INSTITUTE IN PHYSICS AND PHYSICAL SCIENCE FOR K-12 INSERVICE TEACHERS

June 27–July 29, 2016*

*If these start and end dates conflict with your academic calendar, please contact us prior to applying.

This five-week Institute, supported by the National Science Foundation, is intended to help prepare teachers to teach physics and physical science as a process of inquiry. The laboratory-based curriculum used in the Institute, *Physics by Inquiry* (Wiley & Sons), was developed by the Physics Education Group at the University of Washington (UW). It emphasizes the development of fundamental scientific concepts and reasoning skills as well as the ability to relate the formalism of science to real-world phenomena.

Participants receive 10 upper-division undergraduate physics credits at the UW. If funding is available, participants will receive a stipend. Tuition is waived. Funds may be available to help defray lodging costs
